

LDAP Admin Tool 4.0

A LDAP Browser, Editor, Query & Export Tool

LDAP Admin Tool is a simple and easy to use GUI administration tool for LDAP management, control and development. It not only supports the latest LDAP features but also allows you to mass edit entries using SQL-like syntax, accomplish LDAP administration operations in a few mouse clicks, view and edit data including binary and images, export and import data to/from most popular file formats, edit attributes using different editors, manage LDAP users and their privileges and employ many other admin functions designed for making your work with LDAP servers comfortable and efficient. Some core features of our LDAP Admin Tool are listed below.

1. Easy LDAP management
2. Connect to directories locally, remotely or using SSL
3. Easy SSL
4. Easy user administration
5. Easy group management
6. Export data in Excel, CSV and LDIF formats
7. Import data from LDIF files
8. Create/edit passwords using SHA, SSHA, MD5, SMD5 and CRYPT
9. Tabbed browsing
10. Drag and drop
11. Simple and advanced search
12. Visual LDAP filter builder
13. Multiple LDAP bind
14. SQL syntax search
15. Mass update using SQL-like syntax
16. Powerful attribute editors
17. Access multiple directories
18. Browse large directories
19. View all available attributes
20. Customization according to your needs
21. Multiple entries/directory sizing
22. Both windows and linux versions available

Features:

Easy LDAP Management : LDAP Admin Tool allows you to create and edit entries efficiently. LDAP connection profiles give you the opportunity to connect to a LDAP server in one touch and solely work with the selected LDAP connection.

Drag and Drop: LDAP Admin Tool provides you with the ability to copy or move objects across containers by dragging and dropping the entries or containers, using Windows/Linux clipboard to copy a set of objects such as DN, LDIF or others. You can perform operations with multiple objects or simply with a single object.

When you select an entry, all cut, copy, paste, rename and delete operations occur relative to this selected entry.

Tabbed Browsing: Tabbed browsing in LDAP Admin Tool lets you load different connections in separate tabs of a single admin tool window, so you can jump between them quickly and easily. Using tabs instead of new windows to display content creates a smaller memory footprint and therefore reduces the strain on your operating system and the directory servers.

Monitoring Performance: Retrieve statistics from LDAP servers using the LDAP Admin Tool server monitor.

Access Multiple Directory Servers: LDAP Admin Tool allows you to access OpenLDAP, Netscape/iPlanet, Novell eDirectory, Oracle Internet Directory, IBM Tivoli Directory, Lotus Domino, Microsoft Active Directory, ADAM or any other LDAP v2 or LDAP v3 directory server. You can also connect to multiple directory servers simultaneously and copy data across servers.

One Size Doesn't Fit All: LDAP Admin Tool lets you customize the behavior of its tools and set a number of other preferences. From the preferences menu you can customize the attribute column shown, adjust the attribute type colors (Required, Optional, Operational, or New attributes), logging, startup options, value editors for attributes and confirmations.

Multiple Entries/ Directory Sizing/Simulate Load: LDAP Admin Tool allows you to create multiple entries from any one entry. You can create hundreds of thousand of entries from any one entry to determine the sizing of your LDAP server or simulate the load by running multiple instances of LDAP Admin tool to create multiple entries.

SSL: LDAP Admin Tool allows you to connect to the LDAP server using SSL/TLS. You can add a certificate to your store using Manage Certificates or the Tool will prompt you to add the certificate to your store, as is the case with any html browser. The Tool's message states, "Would you like to continue anyway?"

Export Data from LDAP Server Easily: Export data to various formats, including MS Excel, CSV (Comma Separated) and LDIF (LDAP Data Interchange Format).

Import Data from LDIF Files: LDAP Admin Tool wizards allow you to import data from LDIF files to your directory. LDAP Admin Tool supports add, create and modify (including delete and rename) LDIF import operations.

Powerful Search: LDAP Admin Tool provides a powerful search tool which allows you either to create the search filter text directly or to build a filter visually by selecting the necessary attributes.

Query LDAP-like Database: LDAP Admin Tool allows you to search the LDAP using SQL-like syntax. It provides two powerful tools which allow you either to edit query text directly with syntax highlighting or to build a query visually with a drag and drop function using keywords and attributes.

Powerful Attribute Editors: LDAP Admin Tool wizards and editors allow you to create, edit and delete attributes of your choosing. The Tool provides a set of powerful editors to edit the binary, Hex, File, image, object class, DN, Generalized Time, Boolean and Integer fields.

Password Editor: LDAP Admin Tool's password editor allows you to enter password in plain text as well as various hash methods: SHA, SSHA, MD5, SMD5 and CRYPT methods are supported.

Image Editor: With LDAP Admin Tool Image editor you can add or update jpeg photo images. Our image editor automatically converts different photo formats to jpg and adds or updates the existing images.

*Scheduling, Predefined LDAP/AD Searches and command line features are available in **LDAP Admin Tool Professional Edition***

*LDAP Reporting is available in **LDAP Admin Tool Reporting Edition***
